

TRAINING COMPLETION REPORT

AI Foundation — Session 1 of 3

Client: Silver Consumer Electricals

Session: AI Foundation (Session 1 of the 5-part AI capability-building series)

Participants: 75+ — Managers, Heads, and Senior Positions across all Silver plants

Delivery: Conducted across two sessions

1. Content Covered

Area	Details
What is AI, data, data privacy	AI and human interaction
Why prompting matters	Live examples — birthday wish message, husband-wife fight consolation message
Frameworks taught	RCTCF and AIM

2. Mode of Delivery

The session was delivered through a mix of PPT-based instruction and live facilitation using a pen tablet for real-time annotation, allowing concepts to be built visually in front of the room rather than presented as static slides alone. A live demo on ChatGPT anchored the discussion around AI capability, while a dedicated hands-on segment allowed participants to implement the frameworks themselves in real time, using their own mobile devices and laptops.

3. Engagement & Feedback

Both sessions saw active, sustained participation from start to finish, with participants staying engaged well beyond the usual attention span expected in a 90-minute session — in fact, the session was reported to have felt like it lasted only 10 minutes. Feedback shared by participants was extremely positive, and there was a clear, repeated expectation voiced across the room for more sessions of this kind to be conducted going forward.

4. Session Highlights

Full-room engagement — 75+ participants across managerial and senior levels

Facilitator walking through "Where Are We Already Using AI?" as part of the AI Foundation content

Participants applying the RCTCF/AIM framework hands-on, on their own laptops and mobile devices

Live facilitation in progress

5. Next Steps

The remaining content from the AI Foundation roadmap will be carried forward and covered as part of Session 2.
